

Introducing the new

EcoBailer Pro BIGMOUTH Bailer

This new bailer from Field Environmental Instruments has a superfast sink rate without creating turbidity, which means less dissolved oxygen in the well sample. This is achieved through its new hydrodynamic design and wider spout opening. Its "Bigmouth" design creates less drag on descent and less disturbance of the well water column. Samplers can now spend less time bailing while retrieving more accurate groundwater samples.

features

- New easy to handle emptying device allows more accurate control of liquid flow into sample container
- New pour spout and ball retainer prevents ball from interfering with liquid transfer from bailer
- Weighted and unweighted versions available in 1', 3' and 4' lengths
- Available in clear PVC and polyethylene for 2" diameter well casings

“an evolutionary step forward in bailer design”
