The QWD is here!

Finally, a quick, low cost, effective way to develop small diameter wells.

Qwater is excited to introduce the US Patented Qwater Well Development (QWD) tool. After years of testing, improving and trial marketing, we are now producing the best product available for well development.

The QWD utilizes the surge block method and ball check valve to develop wells faster and more effectively while maximizing the well yield and lowering water turbidity. Utilizing the ball check valve, the QWD will pump water and mud over 50 feet without clogging. Economically priced, the QWD tool is disposable after each well use to eliminate cross-well contamination.

QWD is the only product on the market that will effectively develop a well and purge clays and silt all in one step without tripping out of the casing. Stop destroying those expensive submersible pumps with harmful grit! The QWD can be connected to a standard rigid 1/2-inch PVC or coiled polyethylene pipe to be used as a push-rod and riser. The QWD is currently available in 4 sizes (0.75-inch, 1-inch, 1.5-inch, and 2-inch) for small diameter direct push and monitoring wells.
